ASM ANNUAL GENERAL MEETING 2025

12:30 PM – 02:00 PM

LUNCH

Professionalism Considerations in Using Large Language Models in Actuarial Applications (Virtual)

In the last 2 years, an explosion in the usage of large language models (LLMs) has produced widespread excitement but also anxiety about the potential of AI to simplify or perhaps replace human work. In this session we'll briefly review these models and how they might be used for actuarial work, and then focus on the professionalism considerations for any actuaries relying on these models.

Speakers:

JOSH TAUB, FCAS

Director of CAS Exam, *Casualty Actuarial Society*

Josh Taub is the Director of CAS Exams and instructor for CAS exams 5 & 8 for The Infinite Actuary, and has helped more than 7,000 students prepare for their actuarial exams. After spending the first decade of his career at Farmers Insurance, Josh has worked at, advised, and invested in tech startups both in and outside of insurance. Josh has spoken at CAS sponsored events in the U.S. and internationally, and has been published in Carrier Management and Property/Casualty 360.

He is an active CAS volunteer and received the CAS Above & Beyond Achievement Award for volunteers in 2018 and 2024. Josh is also an avid traveler, having been to over 75 countries, though he currently lives in San Diego with his wife Lolita.

ANDREW DALGAARD , FCAS

Senior Managing Actuary, *Allstate*

Andrew Dalgaard is a Senior Managing Actuary at Allstate. He specializes in personal lines property and casualty pricing and currently leads a Countrywide Vehicle Segmentation team. Andrew joined Allstate in 2004 and has 20 years of actuarial and insurance experience as a personal lines pricing actuary. He has experience performing actuarial work related to profitability analysis, risk management, new product implementation, and rating plan development. Andrew is currently a member of the Casualty Actuarial Society Professionalism Education Working Group and was previously a member on the Casualty Actuarial Society Insurance On-Demand Task Force. He also volunteers with his kids extra-curriculars as a Scouting leader and Downhill Ski Instructor.

Professionalism Considerations in Using Large Language Models in Actuarial Applications (Virtual)

In the last 2 years, an explosion in the usage of large language models (LLMs) has produced widespread excitement but also anxiety about the potential of AI to simplify or perhaps replace human work. In this session we'll briefly review these models and how they might be used for actuarial work, and then focus on the professionalism considerations for any actuaries relying on these models.

Moderator:

RONALD KOZLOWSKI

CAS Asia Ambassador, *Casualty Actuarial Society*

Ron Kozlowski is a property & casualty consulting actuary with over 35 years of experience, working primarily in pricing, reserving and M&A due diligence for insurance companies, self-insured entities and governmental entities. Ron spent 23 years at Towers Watson before starting his own consulting firm RTK Actuarial & Professional Services.

Ron currently serves as the CAS Asia Ambassador, a member of the CAS International Leadership Group, and as a frequent speaker at the CAS's Course on Professionalism. Ron has previously served on the CAS's Board of Directors, the Leadership Development Committee and the Strategic Planning Committee. Ron is also involved with numerous committees in planning continuing education content for conferences around the globe.
